

Porsche 997 Wing- and Frontspoiler

We transferred our experiences in racing to the road. For the sports driver it is now possible once again to improve the output value with the Porsche 997 with the tail wing. This during racing proved to be satisfactory Technology which increases the output and makes an optimal road-hugging property possible. Also the front spoiler with a suitable front spoiler lip, improves the handling at high speeds. Not only is the look improved, but also functionality becomes the center of attention. The front spoiler manufactured by GRP exentuates the outlines, and the constant lip reduces the aerodynamic lift at the front axle.

For the Porsche 997we offer:

- front spoilers for 997/S
- front spoiler lip suitably for front spoiler
- tail seaweeds 997/S
- tail wings with air RAM system

All parts are supplied with grill in aluminum black.
